

Ivium Technologies is looking for an:

Electrochemical Specialist

Ivium Technologies, founded in 2001, is a fast-growing high-tech company. Currently we are one of the world's leading manufacturers of electrochemical instrumentation. Our main products are potentiostats, galvanostats and battery-cyclers. Our worldwide customer base includes universities and industrial research laboratories.

Your job

You will participate with product development and commercial activities. Your primary tasks:

- *Development of new methodology and improvement of existing techniques:* The continuous innovations in Electrochemical technology, both in applications and instrumentation, demand novel measurement methods, for instance testing on batteries, fuel cells and solar cells.
- *Customer application support:* Advising customers on the use of our products, and analysis of measurement data.
- *Commercial representation:* Sales and marketing to our direct customers, and liaising with our distributors/resellers worldwide. Part of this role will be visiting international conferences for exhibitions and product demonstrations.

We ask

You have completed an academic education, with a specialisation in Electrochemistry, and experience with practical research using potentiostats. You have a good command of written and spoken English. The ability to communicate in Dutch is an advantage, but not mandatory. You are results driven, creative and enterprising. You do not object to traveling.

We offer

A full-time job in a company that is operating in a fast-growing high-tech market. Your job will combine the technical and commercial aspects of innovations. Attractive salary with modern employment conditions.
